

Dyane: the forget your troubles car

You like cars, but you don't like problems

Dyane is the simplest of cars, simple to drive, simple to run. Dyane is a car you will appreciate because she knows how to make you stop worrying about her.

You need a car to do your work

Dyane can do up to 50 miles to the gallon, and has a sump which takes 4 1/2 pints of oil. The causes of mechanical problems have been reduced to a minimum with her. No water pump, no head gaskets, no pipes, no distributor. And you

never need anti-freeze because she's air cooled. She has an alternator to make sure your battery is always being charged. You keep Dyane outside. You don't need a garage, and Dyane is ready to go at all times in all weather. Forget your fear of frost or ice, or even heat.

You like to be comfortable when you drive

Dyane is compact, Dyane is manoeuvrable and simple to drive. But

she's still a full four seater which comes complete with heating/demisting, door pockets, and a vast boot which will take 2.5 cu.m. of luggage and odds and ends. And she's a four door car with a full height top-hinged tailgate at the rear. Add to this the optional

folding rear seat on the Dyane 6 which you can take out if you want, and you've got an estate car which will take just about everything.

You believe in high average speeds

The Dyane 6 does 70 miles an hour for as long as you want. An oil

cooler looks after the life of her engine. Dyane is front wheel drive, and all four wheels are fitted with an unusual piece of equipment. An inertia damper, which makes sure that each of the four wheels is

always on the ground, that your roadholding is unbeatable, and to make sure you don't lose time.

Perhaps you like long journeys and trips to the country

Dyane likes everything, even your favourite mile of potholes. She's happy in sand, and she's happy in snow. Nothing seems to stop her. Her suspension is now legendary. With her roll-back roof, either

halfway or full length, and with seats which can all be removed, you'll enjoy those trips to the country, to the forests or to the sea. There are two Dyanes: Dyane 4 and Dyane 6.

Dyane 4: 65 miles an hour, and up to 55 to the gallon.

Dyane 6: 73 miles an hour, and up to 45 to the gallon.

With centrifugal clutch optional on both, and on the Dyane 6 separate front seats and a folding rear seat. Take your choice.
